DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a sheet discharge device and a sheet processing device, classified in class 271, subclass 298.
- II. Claims 16-20, drawn to an image forming device, classified in class 271, subclass 3.14.
- III. Claim 21, drawn to a managing method of an image forming device, classified in class 271, subclass 207.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claimed combination does not recite a plurality of sheet discharge units each having a different specification and being mounted to a unit receiving section. The subcombination has separate utility such as any printer that processes sheets and discharges the sheets to a sheet stacking section.

3. Inventions II and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claimed combination does not recite a sheet discharge unit with an increased height from an upper surface of a sheet stacking section to a position where a sheet is discharged from the sheet discharge unit. The subcombination has separate utility such as any printer with a sheet discharge unit and a sheet stacking section.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
